About Biblio

Biblio began as signage typeface for the library of Royal Academy of Art (KABK) in Den Haag. Inspired by the space, “Biblio” is a clean, modern sans with geo-humanist proportions. Its narrow and space-saving letterforms make it suitable for signage or text in headline settings. However, despite the initial intent of use in display sizes, the sturdy-simplified details of Biblio make it a good fit in smaller text sizes too.

In addition to the Upright Signage style, the expansion plan involves an Oblique and Stencil to accompany it, Upright and Italic styles for Text, and eventually a Devanagari cut as well.

Update plan on Future Fonts

- V0.1** Style: Sign; lowercase, uppercase, figures, basic punctuation & symbols including arrows. No kerning, some OpenType Features.
- V0.2** Style: Sign; char set expansion Diacritics and accented glyphs & kerning. Some more additions include extending the punctuation, fractions, symbols, (additional OpenType Features) and a new stylistic set, underline style (ss01).
- V0.3** Webfonts, some icons and symbols suitable for signage
- V0.4** Text Styles in 3 weights; Light, Regular and Bold.
- V0.5** Sign styles; Sign Oblique and Stencil trial.
- V0.6** Vietnamese accents in Text and Sign styles, fill in missing figures and fractions. Add missing kerning.
- V0.7** Sign Stencil, Stencil Oblique
- V0.8** Text Italics

CZECH	U vědomí toho, že uznání přirozené důstojnosti a rovných a nezcizitelných práv členů lid-ské rodiny je základem svobody, spravedlnosti a míru ve světě, že zneuznání lidských práv a pohrdání jimi vedlo k barbarským činům, urážejícím svědomí lidstva, a že vybudování světa, ve kterém lidé, zbavení strachu a nouze, se budou těšiti svobodě projevu a přesvědčení, bylo pro-hlášeno za nejvyšší cíl lidu, že je nutné, aby lidská práva byla chráněna zákonem, nemá-li být člověk donucen uchýlovat se, když vše ostatní selhalo, k odboji proti tyranii a útlaku, že je nutné podporovat rozvoj přátelských vztahu mezi národy, že lid Spojených národů zdůraznil v Chartě znovu svou víru v základní lidská práva, v důstojnost a hodnotu lidské osobnosti, v rovná práva mužů i žen a že se rozhodl podporovat sociální pokrok a vytvořit lepší životní podmínky ve
POLISH	Trzecia Sesja Ogólnego Zgromadzenia ONZ, obradująca w Paryżu, uchwaliła 10 grudnia 1948 roku jednomyślnie Powszechną Deklarację Praw Człowieka. Dokument ten stanowi niewątpli-wie jedno z największych i najtrwalszych osiągnięć ONZ. Przetłumaczona na większość języ-ków świata Powszechna Deklaracja Praw Człowieka zbiera oraz porządkuje osiągnięcia i po-stulaty człowieka, który od wielu setek lat toczy nie skończoną jeszcze walkę o swoją wolność i swoją godność. Zważywszy, że uznanie przyrodzonej godności oraz równych i niezbywalnych praw wszystkich członków wspólnoty ludzkiej jest podstawą wolności, sprawiedliwości i po-koju świata, zważywszy, że nieposzanowanie i nieprzestrzeganie praw człowieka doprowadziło do aktów barbarzyństwa, które wstrząsnęły sumieniem ludzkości, i że ogłoszono uroczyste jako najwznioślejszy cel ludzkości dążenie do zbudowania takiego świata
CROATIAN	Hrvatska (službeni naziv: Republika Hrvatska) europska je država, zemljopisno smještena na prijelazu iz Srednje u Jugoistočnu Europu. Hrvatska graniči na sjeveru sa Slovenijom i Ma-đarskom, na istoku sa Srbijom, na jugu i istoku s Bosnom i Hercegovinom i Crnom Gorom. S Italijom ima morsku granicu. Tijekom hrvatske povijesti najznačajniji kulturološki utjecaji dolazili su iz srednjoeuropskog i sredozemnog kulturnog kruga. Prema popisu iz 2001. godine Hrvatska ima 4.437.460 stanovnika. Hrvati čine 89,6% stanovništva, a najznačajnija nacio

BIBLIO

ROMANIAN

Considerînd că recunoaşterea demnităţii inerente tuturor membrilor familiei umane şi a drepturilor lor egale şi inalienabile constituie fundamentul libertăţii, dreptăţii şi păcii în lume, Considerînd că ignorarea şi dispreţuirea drepturilor omului au dus la acte de barbarie care revoltă conştiinţa omenirii şi că făurirea unei lumi în care fiinţele umane se vor bucura de libertatea cuvîntului şi a convingerilor şi vor fi eliberate de teamă şi mizerie a fost proclamată drept cea mai înaltă aspiraţie a oamenilor, Considerînd că este esenţial ca drepturile omului să fie ocrotite de autoritatea legii pentru ca omul să nu fie silit să recurgă, ca soluţie extremă, la revoltă împotriva tiraniei şi asupririi

SLOVAK

Úvod Vo vedomí že uznanie prirodzenej dôstojnosti a rovných a neodcudzite ľných práv členov ľudskej rodiny je základom slobody, spravodlivosti a mieru na svete, že zneužívanie ľudských práv a pohrdanie nimi viedlo k barbarským činom, ktoré urážajú svedomie ľudstva, a že vybudovanie sveta, v ktorom ľudia, zbavení strachu a núdze, budú sa tešiť slobode prejavu a pre-svedčenia, bolo vyhlásené za najvyšší cieľ ľudu, že je nutné, aby sa ľudsk práva chránily zákonom, ak nemá byť človek donútený uchýliť sa, keď všetko ostatné zlyhalo, k odboju proti tyranii a útlaku, že je nutné podporovať rozvoj priateľských vzťahov medzi národmi, že ľud Spojených národov zdoraznil v Charte znovu svoju vieru v základné ľudské práva

ICELANDIC

Inngangsorð Það ber að viðurkenna, að hver maður sé jafnborinn til virðingar og réttinda, er eigi verði af honum tekin, og er þetta undirstaða frelsis, réttlætis og friðar í heiminum. Hafi mannréttindi verið fyrir borð borin og lítilsvirt, hefur slíkt haft í för með sér siðlausar athafnir, er ofboðið hafa samvizku mannkynsins, enda hefur því verið yfir lýst, að æðsta markmið almennings um heim allan sé að skapa veröld, þar sem menn fái notið málfrelsis, trúfrelsis og óttaleysis um einkalíf afkomu. Mannréttindi á að vernda með lögum. Að öðrum kosti hljóta menn að grípa til þess örþrifaráðs að rísa upp gegn kúgun og ofbeldi. Það er mikilsvert að efla vinsamleg samskipti þjóða í milli.

ITALIAN

La Toscana è una regione italiana a statuto ordinario di 3 729 641 abitanti, situata nell'Italia
Centrale, con capoluogo Firenze. Confina a nord-ovest con la Liguria, a nord con l'Emilia-Ro-
magna, a est con le Marche e l'Umbria, a sud con il Lazio. Ad ovest, i suoi 397 km di coste con-
tinentali sono bagnati dal Mar Ligure nel tratto centro-settentrionale tra Carrara (foce del
torrente Parmignola, confine con la Liguria) e il Golfo di Baratti; il Mar Tirreno bagna invece il
tratto costiero meridionale tra il promontorio di Piombino e la foce del Chiarone, che segna
il confine con il Lazio. Il capoluogo regionale è Firenze, la città più popolosa, 382 000 abitanti,
nonché principale fulcro storico, artistico ed economico-amministrativo; le altre città capo-
luogo di provincia sono: Arezzo, Grosseto, Livorno, Lucca, Massa, Pisa, Pistoia, Prato e Siena.
Amministra anche le isole dell'Arcipelago Toscano, oltre ad una piccola exclave situata entro i
confini dell'Emilia-Romagna, in cui sono situate alcune frazioni del comune di Badia Tedalda.

BIBLIO TEXT

48 LIGHT

Earthquake Studies Reveal the Magmatic Plumbing System of the Katmai Volcanoes

36 LIGHT

The volcano is composed of layers of pyroclastic material, mud flows, and lava flows, and it rests on Mesozoic granitic rocks.

30 LIGHT

The interior of the caldera provides textbook examples of many volcanic features such

21 LIGHT

According to the theory of plate tectonics, Earth's lithosphere, its rigid outer shell, is broken into sixteen larger and several smaller plates.

18 LIGHT

At the mid-ocean ridges, two tectonic plates diverge from one another as hot mantle rock creeps upwards beneath the thinned oceanic crust. The decrease of pressure in the rising mantle rock leads to adiabatic expansion and the partial melting of the rock, causing volcanism and creating new oceanic crust. Most divergent plate boundaries are at the bottom of the oceans, and so most volcanic activity on the Earth is submarine, forming new seafloor.

11 LIGHT

Subduction zones are places where two plates, usually an oceanic plate and a continental plate, collide. The oceanic plate subducts (dives beneath the continental plate), forming a deep ocean trench just offshore. In a process called flux melting, water released from the subducting plate lowers the melting temperature of the overlying mantle wedge, thus creating magma. This magma tends to be extremely viscous because of its high silica content, so it often does not reach the surface but cools and solidifies at depth. When it does reach the surface, however, a volcano is formed. Thus subduction zones are bordered by chains of volcanoes called volcanic arcs. Typical examples are the volcanoes in the Pacific Ring of Fire, such as the Cascade Volcanoes or the Japanese Archipelago, or the eastern islands of Indonesia.

8 LIGHT

Hotspots are volcanic areas thought to be formed by mantle plumes, which are hypothesized to be columns of hot material rising from the core-mantle boundary. As with mid-ocean ridges, the rising mantle rock experiences decompression melting which generates large volumes of magma. Because tectonic plates move across mantle plumes, each volcano becomes inactive as it drifts off the plume, and new volcanoes are created where the plate advances over the plume.

The decrease of pressure in the rising mantle rock leads to adiabatic expansion and the partial melting of the rock, causing volcanism and creating new oceanic crust. Most divergent plate boundaries are at the bottom of the oceans, and so most volcanic activity on the Earth is submarine, forming new seafloor.

11 REGULAR

Subduction zones are places where two plates, usually an oceanic plate and a continental plate, collide. The oceanic plate subducts (dives beneath the continental plate), forming a deep ocean trench just offshore. In a process called flux melting, water released from the subducting plate lowers the melting temperature of the overlying mantle wedge, thus creating magma. This magma tends to be extremely viscous because of its high silica content, so it often does not reach the surface but cools and solidifies at depth. When it does reach the surface, however, a volcano is formed. Thus subduction zones are bordered by chains of volcanoes called volcanic arcs. Typical examples are the volcanoes in the Pacific Ring of Fire, such as the Cascade Volcanoes or the Japanese Archipelago, or the eastern islands of Indonesia.

8 REGULAR

Hotspots are volcanic areas thought to be formed by mantle plumes, which are hypothesized to be columns of hot material rising from the core-mantle boundary. As with mid-ocean ridges, the rising mantle rock experiences decompression melting which generates large volumes of magma. Because tectonic plates move across mantle plumes, each volcano becomes inactive as it drifts off the plume, and new volcanoes are created where the plate advances over the plume.

According to the theory of plate tectonics, Earth's lithosphere, its rigid outer shell, is broken into sixteen larger and several smaller plates.

18 BOLD

At the mid-ocean ridges, two tectonic plates diverge from one another as hot mantle rock creeps upwards beneath the thinned oceanic crust. The decrease of pressure in the rising mantle rock leads to adiabatic expansion and the partial melting of the rock, causing volcanism and creating new oceanic crust.
